This creates more efficient terminals that can move freight faster and ultimately generate more revenue. The Long Beach Container ...

This project developed a model to understand energy demand at each EV equipment level that is easily scalable to container demand and EV adoption rate projections.

The ESSOP tool can be used to experiment with different battery types and capacities in order to identify the most favourable solution for a specific port use-case.

The series is intended to inform readers about the design and use of equipment and technology to reduce energy consumption, enhance sustainability and minimise the environmental impact of ...

We select these four challenges of electrification for container terminals in this blog to highlight what we often hear from ports and terminals. To address these challenges with proper ...

Ports are subject to green regulations that require increased port electrification, particularly in getting ships at berth to use electricity instead of fossil fuels.

For electrification of container handling equipment and other port equipment, it is important to not only look at the investment costs and total costs of ownership, but it is also important to regard ...
