Does bisolar change roof tiles?

Traditional solar panels are attached to the roof by making holes for supporting frames. This damages roof structural integrity and increases the chances of water penetration. BiSolar does not alter conventional roof tiles in any way. Traditional solar panels are installed after the installation of the roof, increasing costs.

What is a bisolar roof?

Designed with aesthetics in mind, BiSolar is a new type of solar roof. The system is made from interconnected solar roof tiles that blend in beautifully and are not easily seen. A standard, unaltered concrete roof tile (flat, dark grey). A specially designed solar panel (18.0 Wp, 6.78 V). Looks like a normal tiled roof, adding value to homes.

What are solar tiles?

Solar tiles are roofing materials that can produce energy directly from sunlight. Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof.

Are bisolar solar panels a good investment?

Traditional solar panels are highly visible and spoil the aesthetics of the house. BiSolar PVs have been designed to be the same colour as standard roof tiles, so that the panels blend in and are aesthetically pleasing, even when they are exposed to the sun and active. As such, BiSolar adds substantial market value to homes.

Interested in solar tiles? Our comprehensive buying guide covers everything you need to know, from installation to maintenance and cost savings.

Tailored to meet unique architectural needs, customized solar tiles are available in various sizes, colors, and curvature profiles. Whether matching local roof styles or meeting regulatory design ...

Our solar tiles are a 2-in-1 roofing material. If you want the best-of-the-best, then we've got you - and your house - covered. Significant savings on energy costs and reduced carbon footprint. ...
