Do I need backup power for a Bess auxiliary load?

For certain projects, backup power must be provided for the BESS auxiliary load as required by the BESS supplier or fire codes. Some BESS suppliers mandate uninterrupted power to maintain the operation of thermal management systems, ensuring battery temperatures remain within desired limits to minimize degradation.

Who is responsible for the electricity costs associated with Bess auxiliary loads?

Project owners are also responsible for the electricity costs associated with the BESS auxiliary load during operation. The electricity cost for auxiliary loads depends on the energy consumption (kWh) and the pricing structure set by independent system operators or utilities. For example:

Why is auxiliary power important in Bess project design & development?

As discussed above, auxiliary power is a vital consideration in BESS project design and development. While it is an important aspect, a comprehensive approach, such as the total cost of ownership method, should be used for BESS product evaluation and selection.

What is Bess project design & development?

An Important but Often Overlooked Aspect of BESS Project Design and Development The installation of battery energy storage systems (BESS) has been growing rapidly in the United States and worldwide since 2021, driven by the continuously falling cost of lithium-ion batteries and favorable government policies and incentives.
