-----

As droughts cripple Brazil's hydropower-dependent grid, solar energy is emerging as a critical solution. With 65% of electricity ...

In addition to reducing dependence on fossil fuels, solar energy decreases greenhouse gas emissions, aligning with Brazil's ...

By December, Brazil's total solar capacity reached 56 GW, representing 22.5 percent of its installed power mix. This share placed solar second only to hydropower in the ...

In addition to reducing dependence on fossil fuels, solar energy decreases greenhouse gas emissions, aligning with Brazil's international commitments to combat climate ...

As Brazil continues to lead the way in renewable energy, it solidifies its role as a key player in the global fight against climate change. To dive deeper into the technologies driving ...

These records highlight the growing importance of solar energy in Brazil's energy landscape and its potential to soon become a major force in the country's energy transition.

Wind and solar power generated more than a third of Brazil's electricity in August. This marks the first time these renewable sources have crossed that threshold, according to ...

Solar now ranks as Brazil's second-largest energy source after hydropower, and it's still growing. By late 2025, Brazil's solar output is expected to reach 46.75 billion kWh, keeping ...

Solar energy has great potential in Brazil, with the country having one of the highest levels of insolation in the

world at 4.25 to 6.5 sun hours/day. [4] As of 2019, Brazil generated nearly ...

The total installed solar power in Brazil was estimated at 53.9 GW at February 2025, which consists of about 21.9% of the country's electricity matrix. In 2023, Brazil was the 6th country in the world in terms of installed solar power capacity (37.4 GW). Brazil expects to have 1.2 million solar power generation systems in the year ...

Wind and solar power generated more than a third of Brazil's electricity in August. This marks the first time these renewable sources ...

Planned green-hydrogen hubs along the Northeast coast could add 25-30 GW of additional photovoltaic demand, reinforcing ...

As droughts cripple Brazil's hydropower-dependent grid, solar energy is emerging as a critical solution. With 65% of electricity historically from dams, erratic rainfall has slashed...

Planned green-hydrogen hubs along the Northeast coast could add 25-30 GW of additional photovoltaic demand, reinforcing Brazil's position as Latin America's largest solar ...

Solar energy in Brazil surpassed the 55 GW milestone in March 2025, more than doubling its photovoltaic (PV) count in the last few years. That breakneck expansion is reshaping Brazil's ...
