How has California's battery storage capacity changed since April 2024?

This growth marks a 30% increase since April 2024, underscoring the state's swift progress in building out clean energy infrastructure, especially during a summer marked by record-breaking heat. Within the past five years, California has grown its battery storage capacity by more than 15 times, up from just 770 MW in 2019.

How many MW of energy storage capacity is needed by 2045?

The state is projected to need 52,000 MW of energy storage capacity by 2045 to meet electricity demand. "Energy storage systems are a great example of how we can harness emerging technology to help create the equitable, reliable and affordable energy grid of the future," said CEC Vice Chair Siva Gunda.

Is there a fire at Valley Center energy storage facility?

But there's a problem with fires A fire at Valley Center Energy Storage Facility in San Diego County is the latest in a series of incidents; advocates insist problems will get ironed out in time. Addis and two other state legislators sent a letter to the California Public Utilities Commission Thursday requesting an investigation.

Could a new battery storage site be halted in Santa Cruz County?

Exacerbating those concerns is a new battery storage site proposed in an unincorporated part of Santa Cruz County near Watsonville. An online petition to halt the establishment of any more battery storage facilities in Monterey or Santa Cruz counties has collected more than 2,900 signatures.
