What is the construction of the capacitor container?

The container is a robust rectangular polypropylene case. The internal construction is designed to prevent movement when the capacitor is subjected to mechanical shock or vibration. An inert welding process ensures hermetic sealing.

How do I transport a large capacitor?

As such, large capacitors (>10 lb. each) must be transported as follows. PCB containing capacitors must be packaged in DOT specification containers unless specification packagings are impractical.

Are capacitors a hazard in transport?

Although this section of the regulations references batteries, capacitors do have the potential to store sufficient quantities to pose a hazard in transport. As such, large capacitors (>10 lb. each) must be transported as follows.

Should PCB containing capacitors be packaged in dot specification containers?

PCB containing capacitors must be packaged in DOT specification containers unless specification packagings are impractical. If specification packaging are impractical, non-specification packaging may be used or the item itself may be considered the packaging provided it meets the general packaging requirements of the hazardous material regulations.
