---

All container systems are made of 100% high-grade stainless steel. They are easy to fill and can be cleaned and drained leaving no residues. Hazardous goods approvals guarantee optimum ...

Emerging markets in Africa and Latin America are adopting mobile container solutions for rapid electrification, with typical payback periods of 3-5 years. Major projects now deploy clusters of ...

As a trusted partner for wholesalers, they prioritize corrosion protection that aligns with long-term energy storage needs. This article explores the key corrosion-resistant features ...

In this context a summary of materials and components is presented, followed by description of the involved corrosion mechanisms and techniques of their study.

However, the long-term performance and economic viability of CSP systems are significantly affected by the corrosive nature of molten salts. This study investigates the ...

Technological advancements are dramatically improving solar storage container performance while reducing costs. Next-generation thermal management systems maintain optimal ...

In this project, our goal is to demonstrate that castable cements can be used to make flanged pipe sections. This will offer a lower cost alternative to nickel alloys such as Haynes 230, to form a ...

Our containers and drums are designed and purpose built for use with ADR/RID hazardous substances I, II, and III (X/Y/Z). We are also able to provide certifications in line with IMDG, ...

The superior corrosion resistance of Haynes230 can be attributed to its higher Ni and W content. These results
