How many energy storage projects are there in 2024?

According to data from ACP and Wood Mackenzie, in the first quarter of 2024, the installed capacity of utility-scale energy storage in the United States increased by 84%. In the second quarter of 2024, US developers put into operation 33 energy storage projects in 10 states with an installed capacity of 2.9GW.

How many energy storage projects are there in the United States?

The cumulative installed capacity of energy storage in the United States exceeded 20GW and reached 21.6GW. Among them, 18 energy storage projects are supporting the construction of photovoltaic or wind power facilities, and the other 15 are independent energy storage.

Why is energy storage important?

Energy storage is essential for creating a cleaner, more efficient, and resilient electric grid. Additionally, these projects will provide meaningful benefits to Disadvantaged Communities and Low-to-Moderate Income New Yorkers. Energy storage is essential to a resilient grid and clean energy system.

How do energy storage systems work?

Energy storage systems capture and hold energy for later use by shifting when and how electricity supply and demand are balanced. They're charged using electricity from the power grid during periods of low demand or extra capacity.

But as more energy storage is added, residents in some places are pushing back due to fears that the systems will go up in flames, as a massive facility in California did earlier this year. ...

An Expanded Goal of 6 Gigawatts by 2030  
In 2019, New York passed the nation-leading Climate Leadership and Community Protection Act (Climate Act), which codified some of the most aggressive energy and climate goals in the country, including 1,500 MW of energy storage by 2025 and 3,000 MW by 2030. In June 2024, New York's Public Service Commission expanded the goal to 6,000 MW by 2030. See more on [nysersda.ny.gov](https://nysersda.ny.gov).
