MIT engineers developed a membrane that filters the components of crude oil by their molecular size, an advance that could dramatically reduce the amount of energy needed ...

According to the latest Q2 2025 ESS Supply, Technology, and Policy Report from Clean Energy Associates (CEA), smaller manufacturers are struggling to keep projects afloat ...

Fueled by a flood of government support in the Inflation Reduction Act (IRA), companies announced 19 US battery component or mineral extraction projects, representing \$6.7 billion in ...

The MIT Energy Initiative's annual research spring symposium explored artificial intelligence as both a problem and solution for the clean energy transition.

As MIT's first vice president for energy and climate, Evelyn Wang is working to broaden MIT's research portfolio, scale up existing innovations, seek new breakthroughs, and ...

Giving people better data about their energy use, plus some coaching, can help them substantially reduce their consumption and costs, according to a study by MIT ...

Over 20 GWh of planned energy storage cell production capacity for 2028 has been canceled this year, according to reports compiled by the US Energy Council (CEC). These ...

MIT researchers developed a new fabrication method that could enable them to stack multiple active components, like transistors and memory units, on top of an existing ...

The California Independent System Operator (CAISO) is facing significant delays in processing Battery

Energy storage project construction stagnated

Energy Storage System (BESS) projects due to an influx of ...

Battery energy storage system (BESS) projects are complex undertakings that require coordination across engineering, construction and procurement (EPC), financing and ...

The energy storage challenge remains a critical factor in the construction industry's pursuit of sustainable and efficient building operations. As we've explored, various ...

Los Angeles County is amending its zoning code to add new development standards for battery energy storage projects, potentially creating a de facto moratorium on ...

Across California, large battery storage plants are being planned and constructed in dozens of locations at a pace faster than anywhere else in the United States.

In MIT course 15.366 (Climate and Energy Ventures) student teams select a technology and determine the best path for its commercialization in the energy sector.

The energy storage challenge remains a critical factor in the construction industry's pursuit of sustainable and efficient building ...

Growing energy demand means the U.S. will almost certainly have to expand its electricity grid in coming years. What's the best way to do this? A new study by MIT ...
