What is France's largest lithium project?

One of the country's largest lithium projects, EMILI, is being developed by French multinational Imerys. The project in Beauvoir, central France, where lithium was first detected in the 1960s, hopes to produce enough lithium per year, over 25 years, to power 700,000 EVs.

Why is France upping lithium production?

After years of deindustrialisation, France is upping lithium production to support battery manufacturing and the green transition. Why are the EU and France lurching towards lithium?

The EU's and France's lurch towards lithium is, of course, not just intended to support, and profit, from the energy transition but to buffer an overreliance - and a dominance of future industry - by China, which the US recently accused of "flooding" the market to drive out rivals.

Detailed info and reviews on 5 top Lithium Ion Battery companies and startups in France in 2025. Get the latest updates on their products, jobs, funding, investors, founders ...

Engineered to complement solar folding containers, our lithium-ion battery systems deliver dependable power storage with fast charge/discharge capabilities. Their modular architecture ...

It is located at the crossroad of Lyon, Valence, Grenoble and Saint-Etienne cities, and benefits from the region's industry influence while being closed ...

Next-generation battery management systems maintain optimal operating conditions with 45% less energy consumption, extending battery lifespan to 20+ years. Standardized plug-and-play ...
