-----

This pilot production marks a significant step toward enabling the glass industry to produce full-scale vision area glass for clean, solar energy-producing facades.

Transparent solar panels exemplify this transformation, converting glass from a passive element to an active energy generator that absorbs sunlight while maintaining visibility.

The class template `std::future` provides a mechanism to access the result of asynchronous operations: An asynchronous operation (created via `std::async`, ...

With PV module capacity ramping up, glass suppliers have been investing in new solar glass production capacity. As in India and China, new facilities are popping up in North ...

Checks if the future refers to a shared state. This is the case only for futures that were not default-constructed or moved from (i.e. returned by `std::promise::get_future()`, ...

Competitive strategies range from Chinese producers expanding commodity capacity to Western incumbents investing in ...

With PV module capacity ramping up, glass suppliers have been investing in new solar glass production capacity. As in India and ...

Discover what photovoltaic glass is, how it works, and how to integrate solar energy and automation into homes and businesses efficiently and sustainably.

This pilot production marks a significant step toward enabling the glass industry to produce full-scale vision area glass for clean, solar ...

Unlike `std::future`, which is only moveable (so only one instance can refer to any particular asynchronous result), `std::shared_future` is copyable and multiple shared future ...

Since C++11, `std::future` now has both a `wait()` and a `get()` method, which will wait until the future has a valid response, with the latter method waiting (blocking) and then ...

If the future is the result of a call to `async` that used lazy evaluation, this function returns immediately without waiting. The behavior is undefined if `valid()` is false before the call ...

Measuring 101.6 cm by 152.4 cm, this innovative glass window can generate solar power while maintaining a clear view, marking a significant milestone in the quest for ...

The global increase in solar capacity, driven by government incentives and the push for renewable energy, is increasing the demand for solar glass. Countries are investing in large ...

Recent developments in glass manufacturing have led to ultra-clear, low-iron glass, which enhances light transmission and improves efficiency. In addition, new innovations in ...

In summary: `std::future` is an object used in multithreaded programming to receive data or an exception from a different thread; it is one end of a single-use, one-way ...
