Are square batteries a good choice for industrial equipment?

Square batteries have no problem in ordinary electronic products, but for industrial equipment products with multiple series and parallel connections, it is best to use standardized cylindrical lithium-ion batteries, so that the production process is guaranteed and it is easier to find replacement batteries in the future.

What is a cylindrical battery?

The cylindrical battery is convenient for the combination of various forms and is suitable for the full layout of electric vehicle space design. Cylindrical batteries, however, are usually made of steel or aluminum, which are heavy and have relatively low specific energy.

Which electric vehicle companies are launching pouch power lithium-ion battery production lines?

In recent years, domestic mainstream electric vehicle enterprises such as Dongfeng, Zotye, Baic New Energy have also begun to try pouch power lithium-ion battery, Shanghai Kanai New Energy, Shandong Hengyu and other companies have also begun to invest in pouch power lithium-ion battery production lines.

Why is a cylindrical lithium ion battery better than a square battery?

The cylindrical lithium-ion battery production process is mature, PACK cost is low, battery product yield and battery PACK consistency is high; Due to the large heat dissipation area of the battery pack, its heat dissipation performance is better than that of the square battery.
