Are there power stations in Norway?

The following page lists some power stations in Norway. Norway produces a total of 13,570 MW for power consumption. For traction current, see Electric power supply system of railways in Norway. The plant was supposed to be closed at the end of 2018, but was still in operation as of 2021.

What are the three levels of the Norwegian electricity grid?

The Norwegian electricity grid consists of three levels: the transmission grid (operated by Statnett), the regional distribution grid and the local distribution grid. Both the regional and the local distribution grids are considered as distribution systems, as defined by EU legislation.

How many power plants are there in Norway?

Norway has around 3 power plants burning natural gas, depending on how they are counted: Mongstad 280 MW CHP, Kårstø; 420 MW (now closed), and Tjeldbergodden 150 MW (unused). They are rarely used, as hydropower is usually cheaper.

How does the electricity grid work in Norway?

The electricity grid enables electricity transport from producers to consumers, and connects Norway's power system to other countries' systems. The three fundamental functions of the power supply system are: A reliable supply of electricity is crucial in modern society.

This is a subproject of the Norway mapping project where information about the infrastructure network in Norway is collected. Please help by adding more information.

The following page lists some power stations in Norway. Norway produces a total of 13,570 MW for power consumption. For traction current, see Electric power supply system of railways in Norway.
