Do you need a battery storage system?

But with residential battery storage, you can store that extra power to use when your panels aren't producing enough electricity to meet your demand. Most batteries have a limit on how much energy you can store in one system, so you may need multiple batteries if you want to have enough capacity for long-duration backup.

What is a battery storage system?

The Public Utilities Code defines an energy storage system as a commercially available technology that absorbs energy, storing it for a specified period, and then dispatches the energy. From 2018 through mid-2025, battery storage capacity in California increased from 500 megawatts (MW) to more than 16,900 MW.

How much battery storage do I Need?

Typical storage need: 10-20 kWh for 1-2 days of essential power. A reliable solar battery backup system ensures your home stays powered when the grid fails, providing peace of mind during emergencies. Many utilities charge higher rates during peak hours (typically 4-9 PM). Battery storage allows you to:

How much power does a home battery have?

Some batteries offer just 3-5 kW of power—enough for lights, a fridge, and a few other essentials. Quality home battery systems are modular, which means that you can scale both energy storage capacity and output power based on your needs.
