What is a fiber repeater?

Fiber Repeaters are used to extend and repeat Ethernet data signals over multimode or single mode fiber up to 160km [100 miles]. If you need to convert Single Mode to Multimode, or extend a Multimode network, Fiber Optic Repeaters are the devices to use.

How do I choose a fiber optic repeater?

The quality of Fiber Optic Repeater that you choose will affect the uptime of your network. Choose quality products. Choose Perle. Perle Fiber Optic Repeaters extend and repeat Ethernet data signals over multimode or single mode fiber optic lines up to 160km (100 miles).

How does a fiber optic repeater work?

The fiber optic cable is connected to the fiber optic ports by a low-loss, industrial ST-type connector. All of the repeaters are passive, meaning there is no regeneration of the received signal in the repeater, and no additional delay to the signal produced by the repeater.

How do I mount a fiber optic repeater?

Fiber Optic Repeater models are available for mounting on a horizontal shelf or vertical panel. Your choice of mounting method should provide access to the Repeater for observing its status indicators. You should also locate the unit for easy access to its rear panel connectors, for ease of installation and future servicing.

Plan your outdoor fiber installation carefully by surveying the site, choosing the right cable type, and following FOA and OSP standards to ensure reliability. Select the best ...
