Market  
A solar inverter or photovoltaic (PV) inverter is a type of power inverter which converts the variable direct current (DC) output of a photovoltaic solar panel into a utility frequency alternating current (AC) that can be fed into a commercial electrical grid or used by a local, off-grid electrical network. It is a critical balance of system (BOS)-component in a photovoltaic system, allowing the use of ordinar...

To truly understand how solar inverters work, imagine solar panels soaking up sunlight and creating a stream of DC electricity. This DC is then sent to the inverter, which ...
