What are inverter settings?

Inverter Settings 1. To set output voltage of inverter - This is normally 230 Vac. Possible values 210V ~ 245V. 2. Used to enable/disable the internal ground relay functionality. Connection between N and PE during inverter operation. - The ground relay is useful when an earth-leakage circuit-breaker is part of the installation.

How do I set the inverter settings to default?

The inverter settings can be set to default in the following way: Navigate to the inverter settings by clicking on the cog symbol in the right top corner. Click on the 3 dot symbol in the right top corner. Select "Reset to defaults" from the menu and the settings will reset to default.

How do I configure a victron inverter?

The inverter is ready for use with the standard factory settings (see the Technical specifications chapter). The inverter can be configured using the VictronConnect app. Connect using a smartphone or tablet via Bluetooth or using a computer via USB and a VE.Direct to USB interface). Settings may only be changed by a qualified engineer.

What is the output voltage and frequency of the inverter?
