How to maintain a portable power station?

Performance: A clean exterior, working cables, and healthy battery are all critical factors in maintaining top-notch performance for your portable power station. Safety: Regular maintenance such as battery voltage testing, cable inspections, and secure connections are necessary to ensure the safe operation of your portable power station.

What happens if you leave a portable power station unused?

It's very common to forget about your portable power station, and leave it sitting unused in a closet or garage. If you do this for more than 12 months at a time, you risk severely damaging the machine over time, and significantly reducing the life of the battery. Here are a few reasons why regular maintenance is important.

Should you cover a power station?

Using a cover can help protect the unit from dust and accidental damage while in storage. Not the best conditions to store a power station in, even if it's water resistant! If you're not planning to use your power station for an extended period, charge it to around 50% capacity before storing it. This helps preserve the battery's health.

How should a power station be stored?

Store safely: Store the power station in a cool, dry location elevated a few inches off the ground. Avoid exposing it to extreme heat, cold, or humidity to prevent damage and corrosion. Consider using a protective case for added safety. Use regularly, every 3-6 months: The battery may lose its charge if the device isn't used for over 12 months.

This guide covers everything you need to know about how your Base battery operates, protects your home, and supports the power grid. You'll also ...
