"Electricity production from renewable resources in Latvia has seen significant growth in recent years, but the momentum gained so far is not enough, and there is still too ...

Given Latvia's high share of renewable electricity, the need for electricity storage technologies will increase significantly. However, there ...

From 1 January 2023 Latvia banned the import of natural gas from Russia. The replacement comes from connections to LNG terminals, the Klaipėda LNG terminal in Lithuania, and from 2024 the recently opened Inkoo LNG terminal in Finland. JSC Conexus Baltic Grid is the natural gas transmission system operator in Latvia. International transmission pipelines are 577 km long, consisting of the Riga-Pahneva, Pleskava-Riga, Izbors...

Latvian engineers have sort of cracked the code on rapid deployment. Their containerized systems can be operational within 48 hours of delivery, compared to the European average of ...

Latvia's strong foundation in hydropower, combined with the untapped potential of wind, solar, and bioenergy, positions the country as a leader in green energy innovation.

The Park will consist of 240,000 solar panels, with a total capacity of 148 MW, and be able to produce around 154,550 MWh annually, providing electricity equivalent to the ...

The Park will consist of 240,000 solar panels, with a total capacity of 148 MW, and be able to produce around 154,550 MWh ...

This joint Latvian-Estonian offshore wind farm, set for completion by 2030, will strengthen both countries"

energy independence while advancing the goals of the European Green Deal.

Solar energy, while still underutilized, is gaining momentum as small-scale projects emerge nationwide. Despite Latvia's progress, ...

Given Latvia's high share of renewable electricity, the need for electricity storage technologies will increase significantly. However, there are also challenges, such as the need ...

Latvia's expertise in outdoor inverter technology combines durability with high efficiency, making it ideal for harsh climates. These inverters are designed to convert DC power from solar panels ...

Renewable energy includes wind, solar, biomass and geothermal energy sources. Almost half of the electricity used in the country is provided by renewable energy sources.

Solar energy, while still underutilized, is gaining momentum as small-scale projects emerge nationwide. Despite Latvia's progress, challenges remain. Heavy reliance on ...

To reach their renewable energy targets, government agencies and entrepreneurs have developed significant wind and solar electricity generation capacity. Many stretches of ...
