The siting of the screen is very important to avoid data degradation by the effects of ground cover, buildings and trees: WMO 2010 recommendations, if incomplete, are a sound basis. In addition, Environment Canada, for example, recommends that the screen be placed at least twice the distance of the height of the object, e.g., 20 m (66 ft) from any tree that is 10 m (33 ft) high. In the northern hemisphere, the door of the screen should always face north so as to prevent dir...

What would you do if you were climbing just below a #Lebanese #SOF soldier who lost his footing atop a 100-foot caving ladder hooked to a container ship, flipping upside down and hanging on...

This public service is the one and only source of all information regarding weather forecasting and climate in Lebanon, including aviation weather services. We are committed to providing high ...

Folding container houses offer a space-saving solution for housing weather equipment, with their compact size making them perfect for placement in small or constrained areas.

Proper weather station installation is vital for accuracy. We've assembled this list of weather station mounting ideas based on personal experience.

Unlike traditional containers that require cranes and heavy machinery for placement, our folding units are transported in a collapsed, flat-pack form. This ingenious ...

When blizzards rage in the Arctic, sandstorms scorch the desert, or typhoons batter coastal regions, traditional structures often crumble. But there's a solution that stands firm: ...

A special type of Stevenson screen with an eye bolt on the roof is used on a ship. The unit is hung from above
