-----

Our BESS facilities utilize advanced lithium-ion battery technologies that capture electricity produced by renewable and non-renewable sources to ...

Meralco PowerGen Corp. is planning to put up a 20 to 40-megawatt-hour battery energy storage system in Carmen, Cebu next year ...

In conclusion, we have seen that battery electricity storage is a crucial technology for the Philippines. With its current energy infrastructure facing challenges such as high costs and ...

Full capacity is targeted by 2027, pending regulatory approvals. "This project is part of our broader commitment to strengthen ...

The passage of Republic Act No. 11234, entitled "Energy Virtual One-Stop Shop (EVOSS) Act" on 08 March 2019 paved the way for streamlining and expediting the permitting ...

Full capacity is targeted by 2027, pending regulatory approvals. "This project is part of our broader commitment to strengthen the reliability of the grid and accelerate the country"s ...

Major projects now deploy clusters of 20+ containers creating storage farms with 100+MWh capacity at costs below \$280/kWh. Technological advancements are dramatically improving ...

The Philippines has long depended on fossil fuels such as coal and natural gas, leading to an unstable power supply. As a result, remote islands increasingly rely on energy storage ...

We've deployed 800+ MWh of storage capacity across Southeast Asia, with systems designed for Cebu's tropical climate and unique grid requirements. The lithium battery energy storage ...

As renewable energy adoption accelerates across Southeast Asia, Cebu emerges as a strategic hub for lithium battery production. This article explores cutting-edge processing techniques, ...

Meralco PowerGen Corp. is planning to put up a 20 to 40-megawatt-hour battery energy storage system in Carmen, Cebu next year to address the Visayas region's regulating ...

This article explores how cutting-edge battery technology addresses power reliability challenges while supporting solar and wind integration across residential, commercial, and industrial sectors.

Our BESS facilities utilize advanced lithium-ion battery technologies that capture electricity produced by renewable and non-renewable sources to store for discharge at a later time.
