Can Malta import hydrogen from Italy?

Malta is also actively studying the possibility of importing hydrogen from Italy through the Melita TransGas Pipeline project, which will not only end Malta's isolation from the trans-European gas network but will also provide an opportunity to import renewable gases, such as green hydrogen or biomethane, once the market develops.

Does Malta have a natural gas pipeline?

Malta also has no natural gas pipeline interconnection with neighbouring countries. Notwithstanding Malta's spatial and infrastructural limitations, the Energy & Water Agency aims to maximise the country's use of renewable energy sources.

How has Malta changed its energy mix?

In recent years, Malta has transformed its energy mix used for electricity generation from one based on heavy fuel oil and gasoil to a more sustainable combination of natural gas, electricity imports via the Malta-Italy subsea connection, and increased use of renewable energy sources.

How secure is Malta's energy supply?

The security of Malta's energy supply is a key area of focus for us. Being a small island, Malta has a small electricity supply system and only a single electricity supplier (Enemalta plc) and depends heavily on imported energy sources. Malta also has no natural gas pipeline interconnection with neighbouring countries.

Malta has announced an offshore energy and hydrogen strategy to launch by 2025, focusing on developing offshore renewable energy and green hydrogen production. This ...

HydroGenEration, or HGE in short, is looking at floating offshore wind power as a means of supplying electrical power to an offshore hydrogen production and hydrogen storage ...

Hybrid Energy Storage Systems is carrying out research on the conversion of surplus renewable energy into hydrogen. This is an increasingly important means of reducing ...

Identification of Candidate Sites for an Offshore Green Hydrogen Production Plant Concept with Integrated FLASC Energy Storage in Malta's Exclusive Economic Zone

Using floating wind turbines and hydro-pneumatic energy storage, Malta can produce green hydrogen to power the maritime sector and reduce CO2 emissions. Preliminary studies show ...

The Energy Unit at the Energy & Water Agency supports the Government in implementing energy policies that ensure a secure, affordable and sustainable energy system in Malta.

The Energy Unit at the Energy & Water Agency supports the Government in implementing energy policies that ensure a ...

In view of enhancing its energy supply security and decarbonising its energy supply, Malta could consider producing hydrogen based on renewable electricity and transporting it by road to end ...

Offshore wind power generation would appear to be a key contributor in a future renewable technology mix for deployment off Maltese shorelines; more specifically in Malta's ...

Using floating wind turbines and hydro-pneumatic energy storage, Malta can produce green hydrogen to power the maritime sector and reduce CO2 ...

Malta has announced an offshore energy and hydrogen strategy to launch by 2025, focusing on developing offshore renewable ...

By introducing a national strategy for hydrogen, Malta would have bigger chances of getting EU funds for the Delimara-Gela pipeline and to start the production of green hydrogen.

By introducing a national strategy for hydrogen, Malta would have bigger chances of getting EU funds for the Delimara-Gela pipeline ...

HydroGenEration, or HGE in short, is looking at floating offshore wind power as a means of supplying electrical power to an ...

Offshore wind power generation would appear to be a key contributor in a future renewable technology mix for deployment off ...
