What is a cell tower battery management solution?

The solution includes live displays for cell tower battery status, charging voltage, temperature, functionality, as well any inconsistencies or outstanding issues. This also includes a remote battery management tool accessible on desktop, web, and mobile to control an under-performing module before it becomes permanently damaged.

Where should cell base stations be located?

An analysis of 100 studies published in Environmental Reviews found approximately 80% showed biological effects near towers. "As a general guideline, cell base stations should not be located less than 1500 ft from the population, and at a height of about 150 ft" (Levitt 2010).

Do aggressive telecom industry wireless infrastructure deployment plans consider community interests?

Aggressive telecom industry wireless infrastructure deployment plans often fail to consider important community interests. This resource provides local elected officials and members of the public with examples of community protective legislative policies that have been adopted by municipalities across the United States.

Where do cell phone base station antennas get the highest RF levels?

Academy of Sciences Journal found the highest RF levels in areas where the cell phone base station antennas were placed on top of utility poles, street lamps, traffic lights or other posts near to the street.
