-----

One effective method for achieving this is sleep mode optimization (SMO), which involves turning off BSs when they are not needed. This research aims to propose a new ...

Therefore, in response to the impact of communication load rate on the load of 5G base stations, this paper proposes a base station energy storage auxiliary power grid peak shaving method ...

Methods dealing with improved transmitter efficiency, system features, fresh air cooling, alternative energy sources and energy saving ...

roduce the system model for the wireless communication network. A mixed-integer nonlinear programming (MINLP) approach to minimize the network's energy consumption is introduced ...

Aiming at the problem of mobile data traffic surge in 5G networks, this paper proposes an effective solution combining massive multiple-input multiple-output techniques ...

Various approaches have been proposed to reduce the energy consumption of an RBS, for instance, passive cooling techniques, energy-efficient backhaul solutions, and distributed base ...

There are two parts in the energy saving calculation system and method of the main base station communication equipment.

To further explore the energy-saving potential of 5 G base stations, this paper proposes an energy-saving operation model for 5 G base stations that incorporates ...

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable

communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for ...

Methods dealing with improved transmitter efficiency, system features, fresh air cooling, alternative energy sources and energy saving during low traffic are given in this paper.

This literature review discusses the current state and future prospects of next-generation mobile networks (NGMNs) and describes ...

This literature review discusses the current state and future prospects of next-generation mobile networks (NGMNs) and describes energy-saving approaches for base ...
