HyNetherlands aims to develop, build, and operate one of the first large-scale industrial value chains in Europe for the production and delivery of renewable-based hydrogen in the Northern ...

With this, the cabinet will accelerate the development of sustainable hydrogen in the Netherlands. This will increase security of ...

The Netherlands is steadily advancing its green hydrogen ambitions, with major infrastructure projects and supportive policies underway. Developers can expect a more ...

The use of hydrogen as a raw material and fuel can reduce industrial emissions and contribute to achieving the climate goals. The hydrogen ...

With this, the cabinet will accelerate the development of sustainable hydrogen in the Netherlands. This will increase security of supply, contribute to making industry and ...

The 11 selected projects have about 602 MW of combined electrolyzer capacity - three times the size of the largest hydrogen plant currently under construction in the Netherlands.

11 new projects with large electrolyzers are being launched by companies in the Netherlands, which will produce sustainable hydrogen with the help of subsidies.

In this slide deck we present an overview of Dutch research, pilot and demonstration projects on hydrogen which are ready to be shared in the public domain. We hope that this overview of ...

Although details are limited, the project is part of the Netherlands' plan to expand renewable hydrogen

production capacity, mainly for industry and transportation, possibly using ...

Today, Dutch Minister for Climate and Energy Rob Jetten announced new plans for the construction of a national transport network for hydrogen. Gasunie will develop the hydrogen ...

Eleven new projects involving large electrolyzers are underway, with companies in the Netherlands providing subsidies to produce sustainable hydrogen. The electrolyzers have ...

The Netherlands is steadily advancing its green hydrogen ambitions, with major infrastructure projects and supportive policies ...

The use of hydrogen as a raw material and fuel can reduce industrial emissions and contribute to achieving the climate goals. The hydrogen network will connect our largest industrial regions ...
