Several types of flow batteries are being developed and utilized for large-scale energy storage. The vanadium redox flow battery (VRFB) currently stands as the most mature ...

A new iron-based aqueous flow battery shows promise for grid energy storage applications.

We assess how de-risking supply chains, enhancing electrolyte designs, and leveraging membrane-less architectures will make flow batteries the most viable solution for ...

Flow batteries are emerging as a transformative technology for large-scale energy storage, offering scalability and long-duration storage to address the intermittency of ...

China's first megawatt iron-chromium flow battery energy storage demonstration project, which can store 6,000 kWh of electricity for 6 hours, was successfully tested and was ...

Here, the authors introduce sodium sulfamate as a Br₂ scavenger, enabling a more durable and higher-energy-density Zn/Br flow battery suitable for large-scale operation.

China has established itself as a global leader in energy storage technology by completing the world's largest vanadium redox flow battery project. The 175 MW/700 MWh ...

Chinese researchers have built a solar redox flow battery (SRFB) that can harvest sunlight and store energy at the same time, while reaching a solar-to-electricity conversion ...

Researchers at the Pacific Northwest National Laboratory (PNNL), a renowned facility operated by the U.S. Department of Energy, have unveiled an innovative approach to ...

Earlier this week, Quino Energy announced a partnership with the clean energy developer Long Hill Energy Partners, towards the goal of installing its first commercial-ready ...
