-----

A new chemistry breakthrough could unlock 12-minute charging and 500 miles of range for electric vehicles. The new design utilizes lithium anodes inside the battery instead of ...

With energy density hitting 400Wh/kg (that's 2x your current lithium-ion battery!), these powerhouses are rewriting EV rules [1] [8]. Let's dive into the top 10 vehicles making gas ...

Electric cars are the future, and each year we've seen ...

Solid-state batteries replace liquid electrolytes with solid ones, boosting EV range to over 500 miles, enabling sub-15-minute charging, and reducing fire risks. As of 2025, ...

Ford cuts EV production but invests in energy storage, using Chinese LFP battery tech to supply U.S. grid and data center demand.

"Holy grail" solid-state batteries may hit the road by the end of the decade. These EVs could be among the first powered by them.

Electric cars are the future, and each year we've seen automakers add more EVs to their lineups. Everyone is working on electric vehicles, from well-established existing ...

New energy storage vehicles encompass a broad spectrum of vehicles that store energy in the form of electricity or hydrogen. This category includes battery electric vehicles ...

A new chemistry breakthrough could unlock 12-minute charging and 500 miles of range for electric vehicles. The new design ...
