When a solar system is installed directly on the purchaser's property, and the renewable energy that it produces is consumed there, it's considered an onsite system.

Through our onsite solar program, we install solar panels at your facility at no cost upfront to you, then we provide electricity to the facility at a fixed price for the next 20 years.

Reduce utility costs, achieve energy independence and meet sustainability goals with renewable on-site solar power-and even sell surplus energy back to the grid.

Complete guide to onsite solar + battery systems for yards: cut energy costs 50%+, reduce demand charges, achieve energy resilience, and meet decarbonization targets ...

The CEC released the 2022 Title 24 California solar mandate changes including new requirements for solar PV, battery storage, and EV charging to encourage the installation of ...

A key element of LADWP's renewable energy program is the development of local solar, particularly customer based programs that tap into the city's abundant sunshine and provide ...

Onsite solar is an asset located where the renewable energy generated will also be consumed. There are three main types of onsite solar: rooftop, ground-mount, and carport.

The Onsite Energy Program leverages a regional network of Technical Assistance Partnerships to help industrial facilities and other large energy users increase the adoption of onsite energy ...

Onsite solar installations are renewable energy systems deployed directly on your business premises. These systems offer immediate and visible benefits while giving you direct ...

To achieve sustainability goals while meeting the increasing electricity demands of electrification, organizations are pairing on-site solar PV generation with on-site energy storage.
