Does San Diego have a wind industry?

The Wind Industry in San Diego: Spinning up clean, renewable energy. Wind energy plays an increasingly important role in San Diego's electricity portfolio. According to the Electric Power Research Institute, the cost of producing wind energy has decreased nearly four fold since 1980.

Can San Diego develop a pumped storage energy project?

When energy demand is high, the stored water is released downhill to turn turbines that produce energy. The Water Authority and City of San Diego are evaluating the feasibility of developing a pumped storage energy project at the City of San Diego's San Vicente Reservoir near Lakeside.

Are San Diego-based wind companies a good investment?

San Diego-based wind companies have the tools and talent necessary to capitalize on this growing market and provide resource-efficient, clean wind energy to power the region and beyond. Wind energy also creates jobs.

How much energy would a San Diego water reservoir store?

It would store 4,000 megawatt-hours per day of energy (500 megawatts of capacity for eight hours), enough energy for about 135,000 households. The San Diego County Water Authority, which owns approximately two-thirds of the reservoir's water storage capacity, is partnering with the City on this potential project.

Learn about storage systems in San Diego County, CA, including nearby companies and cost data based on local quotes.

Whether you're a homeowner eyeing a backyard turbine or a utility manager planning the next mega-farm, remember this: today's wind power energy storage system price ...
