Our integrated circuits and reference designs help you create small cell base stations that enable multiband operation, higher bandwidth and better system reliability.

Small base stations are installed inside stadiums and concert halls to handle massive data traffic. This ensures fans can share live videos, access event apps, and stay ...

Base stations come in various types, including macro, micro, pico, and femto cells. Macro base stations cover large areas and support many users, commonly found in urban and rural ...

OverviewTypes of small cellsUmbrella termPurposeFuture mobile networksMarket deployments to dateSmall cell backhaulSmall cells are low-powered cellular radio access nodes that have ranges from around 10 meters to a few kilometers. They are base stations with low power consumption and cost. They can provide high data rates by being deployed densely to achieve high spatial spectrum efficiency. In the United States, recent FCC orders have provided size and elevation gui...
