Will China build a 5G base station next year?

Technicians from China Mobile check a 5G base station in Tongling, Anhui province. [Photo by Guo Shining/For China Daily] China aims to build over 4.5 million 5G base stations next year and give more policy as well as financial support to foster industries that can define the next decade, the country's top industry regulator said on Friday.

Does 5G work in power grids?

This shows the industry's recognition of their achievements in applying 5G in power grids as 5G smart grids enter the stage of large-scale commercial rollout. The inclusive 5G smart grid solution was jointly developed by the State Grid, China Unicom, Huawei, and TD Tech based on the extensive 5G networks built by China Unicom.

How many 5G smart grids will there be in 2024?

"We will continue to work with China Unicom and Huawei to expand the footprint of 5G smart grids in the electric power sector," added Wang, who estimates that there will be 300,000 5G connections and 150,000 RedCap devices in the sector by June 2024.

Where is the 5G virtual private network coming from?

The solution has now seen widespread commercial deployment across Shandong province, where China Unicom Shandong, State Grid's Shandong branch, and Huawei worked together to build the world's largest 5G virtual private network.

Given insufficient 5G base stations, State Grid Nanjing Power Supply Company addresses the difficulties in 5G base station deployment by allowing such stations to be built at its pylons, ...

The inclusive 5G smart grid solution was jointly developed by the State Grid, China Unicom, Huawei, and TD
