What is a Sunshine grid tie power inverter?

Sunshine Grid Tie Power Inverter is the world's most technologically advanced inverter for use in utility-interactive applications. This manual details the safe installation and operation of the Sunshine Grid Tie Inverter.

Do PV inverters oversize?

PV inverters are designed so that the generated module output power does not exceed the rated maximum inverter AC power. Oversizing implies having more DC power than AC power. This increases power output in low light conditions. You can install a smaller inverter for a given DC array size, or you can install more PV modules for a given inverter.

Can I repair the Sunshine grid tie inverter?

**WARNING:** Do not attempt to repair the Sunshine Grid Tie Inverter, it contains no user-serviceable parts. AC Output Current Waveform and PF Test Of 2000W Model Tested 2000W model at nearly full load, Output current waveform shows good pure sine wave in oscilloscope, PF value also shows in good result, 99.8% PF value.

What happens if you oversize an inverter?

Excessive oversizing can negatively affect the inverter's power production. Inverters are designed to generate AC output power up to a defined maximum which cannot be exceeded. The inverter limits or clips the power output when the actual produced DC power is higher than the inverter's allowed maximum output.
