AR storage capacity is required for any spent fuel management strategy (recycling or disposal), as the amount of heat and radiation generated by the spent fuel needs to decay to levels that ...

Integrating an electrolyzer for hydrogen production and tanks for hydrogen storage with a natural gas power plant that has carbon capture will enable the plant to operate under more steady ...

Large combined-cycle power plant with short start-up time is effective power plant for saving fuel, lower CO₂ emissions and attached great importance for the grid stability. The aim of this work ...

By employing liquid storage and oxy-fuel combustion, the cycle achieves an output power exceeding 3 MW with a CO₂ mass flow rate of 10 kg/s. The system's ESD is ...

In 2019, it was announced that a 316 MW battery storage system would be built at the Ravenswood Generating Station. The system would be the largest in New York state and ...

ALBANY -- The New York State Public Service Commission (Commission) today approved the construction and operation of a battery-based energy storage facility with a capacity of up to ...

This exemption considers the storage of the nine already loaded systems and the near-term planned loading of the six canisters with the CBS variant basket design.

The U.S. Nuclear Regulatory Commission (NRC) is issuing an environmental assessment (EA) and a finding of no significant impact (FONSI) for an exemption request ...

Approval has been granted for construction of a large-scale battery energy storage system (BESS) at the site of

an existing fossil fuel power plant in New York.

This study has proposed a novel oxy-fuel power plant that is coupled with both liquid O₂ storage and cold energy recovery systems in order to adapt to the peak-shaving ...
