A new pumped-storage power station, one of the most powerful in Europe, came on stream in canton Valais in southern Switzerland in July 2022.

As the country encourages rooftop solar, energy communities, and dynamic grid tariffs, the demand for reliable storage and smart energy management is expected to rise sharply.

Switzerland is expanding rules for rooftop solar, energy storage, and energy communities to expand self-consumption and ease ...

In terms of energy storage, an effective increase of 1.2 TWh by 2050 is forecast in the intermediate scenario including dam heightening and a few new periglacial storage HP plants. ...

With 60% of its electricity already coming from hydropower, the country is now blending old-school reservoirs with futuristic battery tech. Think of it as a "Swiss Army knife" ...

The Energy Act, the CO2 Act, the Climate and Innovation Act and the Electricity Supply Act all build on this article and together form the body of legislation on which ...

Switzerland is expanding rules for rooftop solar, energy storage, and energy communities to expand self-consumption and ease pressure on the grid. The new regulations, ...

The key is to have large energy storage systems. If wind turbines or PV plants produce surplus electricity, this energy must be stored, either in pumped storage plants or in ...

Switzerland has been relying on pumped storage to release power on the grid when needed for decades, and
